Trakko : An Interactive Travel Route Tracking and Journal Platform

The Travel Journal Website (Trakko) is a web-based platform that helps users record and manage their travel experiences digitally. It allows users to explore maps, track their travel routes, save visited locations, and organize their journeys in a structured way. The interactive map interface enables users to visually track routes and save them for future reference.

Users can also mark important places or routes as favorites for quick access. In addition, the platform allows users to attach memories such as notes or experiences to specific locations they have visited. This feature transforms the application into a personal digital travel diary.

The website provides a simple and user-friendly interface where users can easily navigate between sections like saved routes, favorites, and profile. Overall, Trakko helps travelers document their journeys, revisit past trips, and preserve travel memories in an organized and interactive manner.

Trakko also helps users visualize their travel history in an organized and interactive way. By displaying routes and locations directly on the map, users can easily review their past journeys and remember the experiences connected to each place. The platform combines route tracking, memory storage, and location bookmarking into a single system, making travel documentation simple and engaging. This makes Trakko not only a route tracking tool but also a digital space where travelers can preserve and revisit their special moments anytime.
